Runway Safety Best Practices

- Always be alert to airport vehicle and pedestrian activity.
- Ask for progressive taxi instructions if you're unfamiliar with the airfield.
- A good preflight check includes a comprehensive review of your departing/alternate/landing airport diagram.
- Review airport diagrams before taxiing or landing.
- Plan each flight chock-to-chock.
- Don't run checklists while taxiing during single-pilot operations.
- When taxiing during two-pilot operations, remember to have one pilot looking out of the cockpit at all times.
- Maintain situational awareness at all times - Practice the "see and avoid" rule - Observe and maneuver to avoid other aircraft.
- When receiving ATC instructions, listen carefully for similar-sounding aircraft call signs.
- When receiving air traffic instructions, listen carefully to what is being said instead of what you expect to hear.
- Look in both directions and final approach before entering a runway, even after receiving a clearance.
- Speak clearly and concisely to the air traffic control tower.
- Read back all hold short instructions.

North Las Vegas, NV (VGT) High Alert Intersections

NOTE: The highlighted areas pose a special challenge to pilots. Please review before operating your aircraft at VGT.

Pilots taxiing east on Taxiway A sometimes fail to hold short of Runway 12L; or traffic neglects to turn onto Runway 12L for takeoff, and departs on Taxiway A by mistake.

Pilots taxiing east on Taxiway A to Runway 30L sometimes miss the turn to Taxiway B and proceed onto Runway 12R without authorization. **Follow the depicted route.**

ATC often holds Runway 12R departures short of Runway 7. Pilots sometimes cross Runway 7 and/or enter Runway 12R without authorization. **When in doubt, give ATC a shout.**

Pilots sometimes enter or cross Runway 12R without authorization. **When unsure and runway's near, remain clear.**

Along with a large number of transient aircraft operations, VGT has many flight training facilities and a significant amount of helicopter operations. Be alert for helicopter rotor wash as they hover taxi.

NOTE: Not for Navigation

If you would like more information, please contact the Clark County Department of Aviation at (702) 261-3800 or the North Las Vegas Airport Traffic Control Tower Manager at (702) 648-6588.
